

BI HomeCell eliminates the need for a home telephone line and is compatible with other supervision technologies, enabling alternative sanctions to be administered to every offender in community supervision programs.

Contact with all Offenders is Possible

According to the Federal Communications Commission, approximately one out of twenty homes in the U.S. does not have telephone service. This ratio jumps to one in five for those without full-time employment and living below the poverty level. Offenders have long used the pretext that they don't have a phone when faced with electronic supervision in the community. Now, there are no excuses.

Product Overview

BI HomeCell works with BI HomeGuard® 205 and operates as a modified receiver enabling cellular communication. HomeGuard is one of the most advanced radio frequency monitoring systems available. Offenders wear the HomeGuard transmitter. The receiver and a cellular unit are placed inside the client's home.

Installation is as easy as connecting the cellular unit to the receiver. To ensure uninterrupted communication to the monitoring computer, the cellular unit connects to a 12-hour battery back-up, which is then plugged into a dedicated power outlet. Officers can easily determine the status of the power supply, the cellular signal, and phone status by checking the LEDs on top of the cellular unit.

Sensors for Increased Reliability

Once the receiver and cellular unit are placed in an area that has a strong, consistent signal, they must stay together and connected. BI HomeCell detects when the link is broken between the receiver and the cellular unit – whether due to intentional or unintentional disconnects such as moving the system or an extended power disruption. With increasing numbers of offenders residing in our communities, criminal justice agencies need a dependable monitoring system to help effectively supervise all offenders – with or without a phone.

Scope: The design, production, installation and support of EM services and products in the Boulder, CO and Anderson, IN facilities.
